#	CIS Control	CIS Sub-Control	Asset Type	Security Function	Title	Description	IG1	IG2	IG3	Relationship	Subcategory	Description	New
1	**1**				**Inventory and Control of Hardware Assets**	**Actively manage (inventory, track, and correct) all enterprise assets (end-user devices, including portable and mobile; network devices; non-computing/Internet of Things (IoT) devices; and servers) connected to the infrastructure physically, virtually, remotely, and those within cloud environments, to accurately know the totality of assets that need to be monitored and protected within the enterprise. This will also support identifying unauthorized and unmanaged assets to remove or remediate.**							
2	1	1.1	Devices	Identify	Establish and Maintain Detailed Asset Inventory	Establish and maintain an accurate, detailed, and up-to-date inventory of all enterprise assets with the potential to store or process data, to include: end-user devices (including portable and mobile), network devices, non-computing/IoT devices, and servers. Ensure the inventory records the network address (if static), hardware address, machine name, enterprise asset owner, department for each asset, and whether the asset has been approved to connect to the network. For mobile end-user devices, MDM type tools can support this process, where appropriate. This inventory includes assets connected to the infrastructure physically, virtually, remotely, and those within cloud environments. Additionally, it includes assets that are regularly connected to the enterprise's network infrastructure, even if they are not under control of the enterprise. Review and update the inventory of all enterprise assets bi-annually, or more frequently.	X	X	X	Equivalent	ID.AM-1	Physical devices and systems within the organization are inventoried	
3	1	1.1	Devices	Identify	Establish and Maintain Detailed Asset Inventory	Establish and maintain an accurate, detailed, and up-to-date inventory of all enterprise assets with the potential to store or process data, to include: end-user devices (including portable and mobile), network devices, non-computing/IoT devices, and servers. Ensure the inventory records the network address (if static), hardware address, machine name, enterprise asset owner, department for each asset, and whether the asset has been approved to connect to the network. For mobile end-user devices, MDM type tools can support this process, where appropriate. This inventory includes assets connected to the infrastructure physically, virtually, remotely, and those within cloud environments. Additionally, it includes assets that are regularly connected to the enterprise's network infrastructure, even if they are not under control of the enterprise. Review and update the inventory of all enterprise assets bi-annually, or more frequently.	X	X	X	Superset	PR.DS-3	Assets are formally managed throughout removal, transfers, and disposition	
4	1	1.2	Devices	Respond	Address Unauthorized Assets	Ensure that a process exists to address unauthorized assets on a weekly basis. The enterprise may choose to remove the asset from the network, deny the asset from connecting remotely to the network, or quarantine the asset.	X	X	X	Subset	DE.CM-7	Monitoring for unauthorized personnel, connections, devices, and software is performed	x
5	1	1.2	Devices	Respond	Address Unauthorized Assets	Ensure that a process exists to address unauthorized assets on a weekly basis. The enterprise may choose to remove the asset from the network, deny the asset from connecting remotely to the network, or quarantine the asset.	X	X	X	Subset	RS.MI-1	Incidents are contained	x
6	1	1.2	Devices	Respond	Address Unauthorized Assets	Ensure that a process exists to address unauthorized assets on a weekly basis. The enterprise may choose to remove the asset from the network, deny the asset from connecting remotely to the network, or quarantine the asset.	X	X	X	Subset	RS.MI-2	Incidents are mitigated	x
7	1	1.3	Devices	Detect	Utilize an Active Discovery Tool	Utilize an active discovery tool to identify assets connected to the enterprise's network. Configure the active discovery tool to execute daily, or more frequently.		X	X	Subset	DE.CM-7	Monitoring for unauthorized personnel, connections, devices, and software is performed	
8	1	1.4	Devices	Identify	Use Dynamic Host Configuration Protocol (DHCP) Logging to Update Enterprise Asset Inventory	Use DHCP logging on all DHCP servers or Internet Protocol (IP) address management tools to update the enterprise's asset inventory. Review and use logs to update the enterprise's asset inventory weekly, or more frequently.		X	X	Subset	DE.CM-7	Monitoring for unauthorized personnel, connections, devices, and software is performed	
9	1	1.5	Devices	Detect	Use a Passive Asset Discovery Tool	Use a passive discovery tool to identify assets connected to the enterprise's network. Review and use scans to update the enterprise's asset inventory at least weekly, or more frequently.			X	Subset	DE.CM-7	Monitoring for unauthorized personnel, connections, devices, and software is performed	
10	**2**				**Inventory and Control of Software Assets**	**Actively manage (inventory, track, and correct) all software (operating systems and applications) on the network so that only authorized software is installed and can execute, and that unauthorized and unmanaged software is found and prevented from installation or execution.**							
11	2	2.1	Applications	Identify	Establish and Maintain a Software Inventory	Establish and maintain a detailed inventory of all licensed software installed on enterprise assets. The software inventory must document the title, publisher, initial install/use date, and business purpose for each entry; where appropriate, include the Uniform Resource Locator (URL), app store(s), version(s), deployment mechanism, and decommission date. Review and update the software inventory bi-annually, or more frequently.	X	X	X	Equivalent	ID.AM-2	Software platforms and applications within the organization are inventoried	
12	2	2.2	Applications	Identify	Ensure Authorized Software is Currently Supported	Ensure that only currently supported software is designated as authorized in the software inventory for enterprise assets. If software is unsupported, yet necessary for the fulfillment of the enterprise's mission, document an exception detailing mitigating controls and residual risk acceptance. For any unsupported software without an exception documentation, designate as unauthorized. Review the software list to verify software support at least monthly, or more frequently.	X	X	X	Superset	ID.AM-2	Software platforms and applications within the organization are inventoried	
13	2	2.3	Applications	Respond	Address Unauthorized Software	Ensure that unauthorized software is either removed from use on enterprise assets or receives a documented exception. Review monthly, or more frequently.	X	X	X	Subset	DE.CM-7	Monitoring for unauthorized personnel, connections, devices, and software is performed	
14	2	2.4	Applications	Detect	Utilize Automated Software Inventory Tools	Utilize software inventory tools, when possible, throughout the enterprise to automate the discovery and documentation of installed software.		X	X	Subset	DE.CM-7	Monitoring for unauthorized personnel, connections, devices, and software is performed	
15	2	2.5	Applications	Protect	Allowlist Authorized Software	Use technical controls, such as application allowlisting, to ensure that only authorized software can execute or be accessed. Reassess bi-annually, or more frequently.		X	X	Subset	DE.CM-7	Monitoring for unauthorized personnel, connections, devices, and software is performed	
16	2	2.6	Applications	Protect	Allowlist Authorized Libraries	Use technical controls to ensure that only authorized software libraries, such as specific .dll, .ocx, .so, etc., files, are allowed to load into a system process. Block unauthorized libraries from loading into a system process. Reassess bi-annually, or more frequently.		X	X	Subset	DE.CM-7	Monitoring for unauthorized personnel, connections, devices, and software is performed	
17	2	2.7	Applications	Protect	Allowlist Authorized Scripts	Use technical controls, such as digital signatures and version control, to ensure that only authorized scripts, such as specific .ps1, .py, etc., files, are allowed to execute. Block unauthorized scripts from executing. Reassess bi-annually, or more frequently.			X	Subset	PR.IP-1	A baseline configuration of information technology/industrial control systems is created and maintained incorporating security principles (e.g. concept of least functionality)	
18	2	2.7	Applications	Protect	Allowlist Authorized Scripts	Use technical controls, such as digital signatures and version control, to ensure that only authorized scripts, such as specific .ps1, .py, etc., files, are allowed to execute. Block unauthorized scripts from executing. Reassess bi-annually, or more frequently.			X	Subset	PR.PT-3	The principle of least functionality is incorporated by configuring systems to provide only essential capabilities	

19	**3**				**Data Protection**	**Operate processes and tooling to control, handle, retain, and dispose the enterprise's data.**								
20	3	3.1	Data	Identify	Establish and Maintain a Data Management Process	Establish and maintain a data management process. In the process, address data sensitivity, data owner, handling of data, data retention limits, and disposal requirements, based on sensitivity and retention standards for the enterprise. Review and update documentation annually, or when significant enterprise changes occur that could impact this Safeguard.	X	X	X	Superset	PR.IP-6	Data is destroyed according to policy	
21	3	3.2	Data	Identify	Establish and Maintain a Data Inventory	Establish and maintain a data inventory, based on the enterprise's data management process. Inventory sensitive data, at a minimum. Review and update inventory annually, at a minimum, with a priority on sensitive data.	X	X	X	Subset	ID.AM-5	Resources (e.g., hardware, devices, data, time, personnel, and software) are prioritized based on their classification, criticality, and business value	
22	3	3.3	Data	Protect	Configure Data Access Control Lists	Configure data access control lists based on a user's need to know. Apply data access control lists, also known as access permissions, to local and remote file systems, databases, and applications.	X	X	X	Equivalent	PR.AC-4	Access permissions and authorizations are managed, incorporating the principles of least privilege and separation of duties	
23	3	3.4	Data	Protect	Enforce Data Retention	Retain data according to the enterprise's data management process. Data retention must include both minimum and maximum timelines.	X	X	X	Subset	PR.DS-1	Data-at-rest is protected	x
24	3	3.4	Data	Protect	Enforce Data Retention	Retain data according to the enterprise's data management process. Data retention must include both minimum and maximum timelines.	X	X	X	Superset	PR.IP-4	Backups of information are conducted, maintained, and tested	x
25	3	3.5	Data	Protect	Securely Dispose of Data	Securely dispose of data as outlined in the enterprise's data management process. Ensure the disposal process and method are commensurate with the data sensitivity.	X	X	X	Subset	PR.DS-3	Assets are formally managed throughout removal, transfers, and disposition	
26	3	3.5	Data	Protect	Securely Dispose of Data	Securely dispose of data as outlined in the enterprise's data management process. Ensure the disposal process and method are commensurate with the data sensitivity.	X	X	X	Equivalent	PR.IP-6	Data is destroyed according to policy	
27	3	3.6	Data	Identify	Encrypt Data on End-User Devices	Encrypt data on end-user devices containing sensitive data. Example implementations can include: Windows BitLocker®, Apple FileVault®, Linux® dm-crypt.	X	X	X	Subset	PR.DS-1	Data-at-rest is protected	x
28	3	3.6	Data	Identify	Encrypt Data on End-User Devices	Encrypt data on end-user devices containing sensitive data. Example implementations can include: Windows BitLocker®, Apple FileVault®, Linux® dm-crypt.	X	X	X	Subset	PR.DS-5	Protections against data leaks are implemented	x
29	3	3.7	Data	Identify	Establish and Maintain a Data Classification Scheme	Establish and maintain an overall data classification scheme for the enterprise. Enterprises may use labels, such as "Sensitive," "Confidential," and "Public," and classify their data according to those labels. Review and update the classification scheme annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Superset	ID.AM-5	Resources (e.g., hardware, devices, data, time, personnel, and software) are prioritized based on their classification, criticality, and business value	
30	3	3.7	Data	Identify	Establish and Maintain a Data Classification Scheme	Establish and maintain an overall data classification scheme for the enterprise. Enterprises may use labels, such as "Sensitive," "Confidential," and "Public," and classify their data according to those labels. Review and update the classification scheme annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Superset	ID.RA-5	Threats, vulnerabilities, likelihoods, and impacts are used to determine risk	
31	3	3.8	Data	Protect	Document Data Flows	Document data flows. Data flow documentation includes service provider data flows and should be based on the enterprise's data management process. Review and update documentation annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Equivalent	DE.AE-1	A baseline of network operations and expected data flows for users and systems is established and managed	
32	3	3.8	Data	Protect	Document Data Flows	Document data flows. Data flow documentation includes service provider data flows and should be based on the enterprise's data management process. Review and update documentation annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Equivalent	ID.AM-3	Organizational communication and data flows are mapped	
33	3	3.9	Data	Protect	Encrypt Data on Removable Media	Encrypt data on removable media.		X	X	Subset	PR.PT-2	Removable media is protected and its use restricted according to policy	
34	3	3.10	Devices	Protect	Encrypt Sensitive Data in Transit	Encrypt sensitive data in transit. Example implementations can include: Transport Layer Security (TLS) and Open Secure Shell (OpenSSH).		X	X	Equivalent	PR.DS-2	Data-in-transit is protected	
35	3	3.11	Data	Protect	Encrypt Sensitive Data at Rest	Encrypt sensitive data at rest on servers, applications, and databases containing sensitive data. Storage-layer encryption, also known as server-side encryption, meets the minimum requirement of this Safeguard. Additional encryption methods may include application-layer encryption, also known as client-side encryption, where access to the data storage device(s) does not permit access to the plain-text data.		X	X	Equivalent	PR.DS-1	Data-at-rest is protected	
36	3	3.12	Network	Protect	Segment Data Processing and Storage Based on Sensitivity	Segment data processing and storage based on the sensitivity of the data. Do not process sensitive data on enterprise assets intended for lower sensitivity data.		X	X	Subset	PR.AC-5	Network integrity is protected (e.g., network segregation, network segmentation)	
37	3	3.13	Data	Protect	Deploy a Data Loss Prevention Solution	Implement an automated tool, such as a host-based Data Loss Prevention (DLP) tool to identify all sensitive data stored, processed, or transmitted through enterprise assets, including those located onsite or at a remote service provider, and update the enterprise's sensitive data inventory.			X	Equivalent	PR.DS-5	Protections against data leaks are implemented	
38	3	3.14	Data	Detect	Log Sensitive Data Access	Log sensitive data access, including modification and disposal.			X	Subset	DE.CM-1	The network is monitored to detect potential cybersecurity events	x
39	**4**				**Secure Configuration of Enterprise Assets and Software**	**Establish and maintain the secure configuration of enterprise assets (end-user devices, including portable and mobile; network devices; non-computing/IoT devices; and servers) and software (operating systems and applications).**							
40	4	4.1	Applications	Protect	Establish and Maintain a Secure Configuration Process	Establish and maintain a secure configuration process for enterprise assets (end-user devices, including portable and mobile, non-computing/IoT devices, and servers) and software (operating systems and applications). Review and update documentation annually, or when significant enterprise changes occur that could impact this Safeguard.	X	X	X	Subset	PR.IP-1	A baseline configuration of information technology/industrial control systems is created and maintained incorporating security principles (e.g. concept of least functionality)	
41	4	4.2	Network	Protect	Establish and Maintain a Secure Configuration Process for Network Infrastructure	Establish and maintain a secure configuration process for network devices. Review and update documentation annually, or when significant enterprise changes occur that could impact this Safeguard.	X	X	X	Subset	PR.IP-1	A baseline configuration of information technology/industrial control systems is created and maintained incorporating security principles (e.g. concept of least functionality)	
42	4	4.3	Users	Protect	Configure Automatic Session Locking on Enterprise Assets	Configure automatic session locking on enterprise assets after a defined period of inactivity. For general purpose operating systems, the period must not exceed 15 minutes. For mobile end-user devices, the period must not exceed 2 minutes.	X	X	X	Superset	PR.IP-1	A baseline configuration of information technology/industrial control systems is created and maintained incorporating security principles (e.g. concept of least functionality)	

43	4	4.4	Devices	Protect	Implement and Manage a Firewall on Servers	Implement and manage a firewall on servers, where supported. Example implementations include a virtual firewall, operating system firewall, or a third-party firewall agent.	X	X	X	Subset	PR.PT-3	The principle of least functionality is incorporated by configuring systems to provide only essential capabilities	x
44	4	4.4	Devices	Protect	Implement and Manage a Firewall on Servers	Implement and manage a firewall on servers, where supported. Example implementations include a virtual firewall, operating system firewall, or a third-party firewall agent.	X	X	X	Subset	PR.PT-4	Communications and control networks are protected	x
45	4	4.5	Devices	Protect	Implement and Manage a Firewall on End-User Devices	Implement and manage a host-based firewall or port-filtering tool on end-user devices, with a default-deny rule that drops all traffic except those services and ports that are explicitly allowed.	X	X	X	Subset	PR.PT-3	The principle of least functionality is incorporated by configuring systems to provide only essential capabilities	x
46	4	4.5	Devices	Protect	Implement and Manage a Firewall on End-User Devices	Implement and manage a host-based firewall or port-filtering tool on end-user devices, with a default-deny rule that drops all traffic except those services and ports that are explicitly allowed.	X	X	X	Subset	PR.PT-4	Communications and control networks are protected	x
47	4	4.6	Network	Protect	Securely Manage Enterprise Assets and Software	Securely manage enterprise assets and software. Example implementations include managing configuration through version-controlled-infrastructure-as-code and accessing administrative interfaces over secure network protocols, such as Secure Shell (SSH) and Hypertext Transfer Protocol Secure (HTTPS). Do not use insecure management protocols, such as Telnet (Teletype Network) and HTTP, unless operationally essential.	X	X	X	Subset	PR.MA-2	Remote maintenance of organizational assets is approved, logged, and performed in a manner that prevents unauthorized access	x
48	4	4.7	Users	Protect	Manage Default Accounts on Enterprise Assets and Software	Manage default accounts on enterprise assets and software, such as root, administrator, and other pre-configured vendor accounts. Example implementations can include: disabling default accounts or making them unusable.	X	X	X	Superset	PR.AC-1	Identities and credentials are issued, managed, verified, revoked, and audited for authorized devices, users and processes	
49	4	4.8	Devices	Protect	Uninstall or Disable Unnecessary Services on Enterprise Assets and Software	Uninstall or disable unnecessary services on enterprise assets and software, such as an unused file sharing service, web application module, or service function.		X	X	Subset	PR.PT-3	The principle of least functionality is incorporated by configuring systems to provide only essential capabilities	x
50	4	4.9	Devices	Protect	Configure Trusted DNS Servers on Enterprise Assets	Configure trusted DNS servers on enterprise assets. Example implementations include: configuring assets to use enterprise-controlled DNS servers and/or reputable externally accessible DNS servers.		X	X	Subset	PR.PT-4	Communications and control networks are protected	x
51	4	4.10	Devices	Respond	Enforce Automatic Device Lockout on Portable End-User Devices	Enforce automatic device lockout following a predetermined threshold of local failed authentication attempts on portable end-user devices, where supported. For laptops, do not allow more than 20 failed authentication attempts; for tablets and smartphones, no more than 10 failed authentication attempts. Example implementations include Microsoft® InTune Device Lock and Apple® Configuration Profile maxFailedAttempts.		X	X	Subset	PR.AC-3	Remote access is managed	x
52	4	4.11	Devices	Protect	Enforce Remote Wipe Capability on Portable End-User Devices	Remotely wipe enterprise data from enterprise-owned portable end-user devices when deemed appropriate such as lost or stolen devices, or when an individual no longer supports the enterprise.		X	X	Subset	PR.AC-3	Remote access is managed	
53	4	4.12	Devices	Protect	Separate Enterprise Workspaces on Mobile End-User Devices	Ensure separate enterprise workspaces are used on mobile end-user devices, where supported. Example implementations include using an Apple® Configuration Profile or Android™ Work Profile to separate enterprise applications and data from personal applications and data.			X	Subset	PR.PT-2	Removable media is protected and its use restricted according to policy	x
54	**5**				**Account Management**	**Use processes and tools to assign and manage authorization to credentials for user accounts, including administrator accounts, as well as service accounts, to enterprise assets and software.**							
55	5	5.1	Users	Identify	Establish and Maintain an Inventory of Accounts	Establish and maintain an inventory of all accounts managed in the enterprise. The inventory must include both user and administrator accounts. The inventory, at a minimum, should contain the person's name, username, start/stop dates, and department. Validate that all active accounts are authorized, on a recurring schedule at a minimum quarterly, or more frequently.	X	X	X	Subset	PR.AC-1	Identities and credentials are issued, managed, verified, revoked, and audited for authorized devices, users and processes	
56	5	5.2	Users	Protect	Use Unique Passwords	Use unique passwords for all enterprise assets. Best practice implementation includes, at a minimum, an 8-character password for accounts using MFA and a 14-character password for accounts not using MFA.	X	X	X	Subset	PR.AC-7	Users, devices, and other assets are authenticated (e.g., single-factor, multi-factor) commensurate with the risk of the transaction (e.g., individuals' security and privacy risks and other organizational risks)	x
57	5	5.3	Users	Respond	Disable Dormant Accounts	Delete or disable any dormant accounts after a period of 45 days of inactivity, where supported.	X	X	X	Subset	PR.AC-1	Identities and credentials are issued, managed, verified, revoked, and audited for authorized devices, users and processes	
58	5	5.4	Users	Protect	Restrict Administrator Privileges to Dedicated Administrator Accounts	Restrict administrator privileges to dedicated administrator accounts on enterprise assets. Conduct general computing activities, such as internet browsing, email, and productivity suite use, from the user's primary, non-privileged account.	X	X	X	Subset	PR.AC-4	Access permissions and authorizations are managed, incorporating the principles of least privilege and separation of duties	
59	5	5.5	Users	Identify	Establish and Maintain an Inventory of Service Accounts	Establish and maintain an inventory of service accounts. The inventory, at a minimum, must contain department owner, review date, and purpose. Perform service account reviews to validate that all active accounts are authorized, on a recurring schedule at a minimum quarterly, or more frequently.		X	X	Subset	PR.AC-1	Identities and credentials are issued, managed, verified, revoked, and audited for authorized devices, users and processes	
60	5	5.6	Users	Protect	Centralize Account Management	Centralize account management through a directory or identity service.		X	X	Subset	PR.AC-1	Identities and credentials are issued, managed, verified, revoked, and audited for authorized devices, users and processes	x
61	**6**				**Access Control Management**	**Use processes and tools to assign and manage authorization to credentials for user accounts, including administrator accounts, as well as service accounts, to enterprise assets and software.**							
62	6	6.1	Users	Protect	Establish an Access Granting Process	Establish and follow a process, preferably automated, for granting access to enterprise assets upon new hire, rights grant, or role change of a user.	X	X	X	Subset	PR.AC-1	Identities and credentials are issued, managed, verified, revoked, and audited for authorized devices, users and processes	
63	6	6.2	Users	Protect	Establish an Access Revoking Process	Establish and follow a process, preferably automated, for revoking access to enterprise assets, through disabling accounts immediately upon termination, rights revocation, or role change of a user. Disabling accounts, instead of deleting accounts, may be necessary to preserve audit trails.	X	X	X	Subset	PR.AC-1	Identities and credentials are issued, managed, verified, revoked, and audited for authorized devices, users and processes	
64	6	6.2	Users	Protect	Establish an Access Revoking Process	Establish and follow a process, preferably automated, for revoking access to enterprise assets, through disabling accounts immediately upon termination, rights revocation, or role change of a user. Disabling accounts, instead of deleting accounts, may be necessary to preserve audit trails.	X	X	X	Subset	PR.IP-11	Cybersecurity is included in human resources practices (e.g., deprovisioning, personnel screening)	

65	6	6.3	Users	Protect	Require MFA for Externally-Exposed Applications	Require all externally-exposed enterprise or third-party applications to enforce MFA, where supported. Enforcing MFA through a directory service or SSO provider is a satisfactory implementation of this Safeguard.	X	X	X	Subset	PR.AC-7	Users, devices, and other assets are authenticated (e.g., single-factor, multi-factor) commensurate with the risk of the transaction (e.g., individuals' security and privacy risks and other organizational risks)	
66	6	6.4	Users	Protect	Require MFA for Remote Network Access	Require MFA for remote network access.	X	X	X	Subset	PR.AC-7	Users, devices, and other assets are authenticated (e.g., single-factor, multi-factor) commensurate with the risk of the transaction (e.g., individuals' security and privacy risks and other organizational risks)	
67	6	6.4	Users	Protect	Require MFA for Remote Network Access	Require MFA for remote network access.	X	X	X	Subset	PR.AC-3	Remote access is managed	
68	6	6.5	Users	Protect	Require MFA for Administrative Access	Require MFA for all administrative access accounts, where supported, on all enterprise assets, whether managed on-site or through a third-party provider.	X	X	X	Subset	PR.AC-7	Users, devices, and other assets are authenticated (e.g., single-factor, multi-factor) commensurate with the risk of the transaction (e.g., individuals' security and privacy risks and other organizational risks)	
69	6	6.6	Users	Identify	Establish and Maintain an Inventory of Authentication and Authorization Systems	Establish and maintain an inventory of the enterprise's authentication and authorization systems, including those hosted on-site or at a remote service provider. Review and update the inventory, at a minimum, annually, or more frequently.		X	X	Subset	PR.AC-1	Identities and credentials are issued, managed, verified, revoked, and audited for authorized devices, users and processes	
70	6	6.6	Users	Identify	Establish and Maintain an Inventory of Authentication and Authorization Systems	Establish and maintain an inventory of the enterprise's authentication and authorization systems, including those hosted on-site or at a remote service provider. Review and update the inventory, at a minimum, annually, or more frequently.		X	X	Subset	PR.AC-3	Remote access is managed	
71	6	6.7	Users	Protect	Centralize Access Control	Centralize access control for all enterprise assets through a directory service or SSO provider, where supported.		X	X	Subset	PR.AC-1	Identities and credentials are issued, managed, verified, revoked, and audited for authorized devices, users and processes	
72	6	6.8	Data	Protect	Define and Maintain Role-Based Access Control	Define and maintain role-based access control, through determining and documenting the access rights necessary for each role within the enterprise to successfully carry out its assigned duties. Perform access control reviews of enterprise assets to validate that all privileges are authorized, on a recurring schedule at a minimum annually, or more frequently.			X	Superset	PR.AC-4	Access permissions and authorizations are managed, incorporating the principles of least privilege and separation of duties	
73	**7**				**Continuous Vulnerability Management**	**Develop a plan to continuously assess and track vulnerabilities on all enterprise assets within the enterprise's infrastructure, in order to remediate, and minimize, the window of opportunity for attackers. Monitor public and private industry sources for new threat and vulnerability information.**							
74	7	7.1	Applications	Protect	Establish and Maintain a Vulnerability Management Process	Establish and maintain a documented vulnerability management process for enterprise assets. Review and update documentation annually, or when significant enterprise changes occur that could impact this Safeguard.	X	X	X	Subset	ID.RA-1	Asset vulnerabilities are identified and documented	
75	7	7.2	Applications	Protect	Establish and Maintain a Remediation Process	Establish and maintain a risk-based remediation strategy documented in a remediation process, with monthly, or more frequent, reviews.	X	X	X	Subset	ID.RA-1	Asset vulnerabilities are identified and documented	
76	7	7.3	Applications	Protect	Perform Automated Operating System Patch Management	Perform operating system updates on enterprise assets through automated patch management on a monthly, or more frequent, basis.	X	X	X	Subset	ID.RA-1	Asset vulnerabilities are identified and documented	x
77	7	7.4	Applications	Identify	Perform Automated Application Patch Management	Perform application updates on enterprise assets through automated patch management on a monthly, or more frequent, basis.	X	X	X	Subset	ID.RA-1	Asset vulnerabilities are identified and documented	
78	7	7.5	Applications	Identify	Perform Automated Vulnerability Scans of Internal Enterprise Assets	Perform automated vulnerability scans of internal enterprise assets on a quarterly, or more frequent, basis. Conduct both authenticated and unauthenticated scans, using a SCAP-compliant vulnerability scanning tool.		X	X	Equivalent	DE.CM-8	Vulnerability scans are performed	
79	7	7.6	Applications	Respond	Perform Automated Vulnerability Scans of Externally-Exposed Enterprise Assets	Perform automated vulnerability scans of externally-exposed enterprise assets using a SCAP-compliant vulnerability scanning tool. Perform scans on a monthly, or more frequent, basis.		X	X	Subset	ID.RA-5	Threats, vulnerabilities, likelihoods, and impacts are used to determine risk	
80	7	7.6	Applications	Respond	Perform Automated Vulnerability Scans of Externally-Exposed Enterprise Assets	Perform automated vulnerability scans of externally-exposed enterprise assets using a SCAP-compliant vulnerability scanning tool. Perform scans on a monthly, or more frequent, basis.		X	X	Subset	PR.IP-12	A vulnerability management plan is developed and implemented	
81	7	7.7	Applications	Respond	Remediate Detected Vulnerabilities	Remediate detected vulnerabilities in software through processes and tooling on a monthly, or more frequent, basis, based on the remediation process.		X	X	Equivalent	RS.MI-3	Newly identified vulnerabilities are mitigated or documented as accepted risks	x
82	**8**				**Audit Log Management**	**Collect, alert, review, and retain audit logs of events that could help detect, understand, or recover from an attack.**							
83	8	8.1	Network	Protect	Establish and Maintain an Audit Log Management Process	Establish and maintain an audit log management process that defines the enterprise's logging requirements. At a minimum, address the collection, review, and retention of audit logs for enterprise assets. Review and update documentation annually, or when significant enterprise changes occur that could impact this Safeguard.	X	X	X	Equivalent	PR.PT-1	Audit/log records are determined, documented, implemented, and reviewed in accordance with policy	x
84	8	8.2	Network	Detect	Collect Audit Logs	Collect audit logs. Ensure that logging, per the enterprise's audit log management process, has been enabled across enterprise assets.	X	X	X	Subset	PR.PT-1	Audit/log records are determined, documented, implemented, and reviewed in accordance with policy	
85	8	8.2	Network	Detect	Collect Audit Logs	Collect audit logs. Ensure that logging, per the enterprise's audit log management process, has been enabled across enterprise assets.	X	X	X	Subset	DE.AE-3	Event data are collected and correlated from multiple sources and sensors	
86	8	8.3	Network	Protect	Ensure Adequate Audit Log Storage	Ensure that logging destinations maintain adequate storage to comply with the enterprise's audit log management process.	X	X	X	Subset	PR.DS-4	Adequate capacity to ensure availability is maintained	x
87	8	8.4	Network	Detect	Standardize Time Synchronization	Standardize time synchronization. Configure at least two synchronized time sources across enterprise assets, where supported.		X	X	Subset	PR.PT-1	Audit/log records are determined, documented, implemented, and reviewed in accordance with policy	
88	8	8.5	Network	Detect	Collect Detailed Audit Logs	Configure detailed audit logging for enterprise assets containing sensitive data. Include event source, date, username, timestamp, source addresses, destination addresses, and other useful elements that could assist in a forensic investigation.		X	X	Subset	DE.AE-3	Event data are collected and correlated from multiple sources and sensors	
89	8	8.5	Network	Detect	Collect Detailed Audit Logs	Configure detailed audit logging for enterprise assets containing sensitive data. Include event source, date, username, timestamp, source addresses, destination addresses, and other useful elements that could assist in a forensic investigation.		X	X	Subset	DE.CM-1	The network is monitored to detect potential cybersecurity events	

90	8	8.6	Network	Detect	Collect DNS Query Audit Logs	Collect DNS query audit logs on enterprise assets, where appropriate and supported.		X	X	Subset	DE.AE-3	Event data are collected and correlated from multiple sources and sensors	
91	8	8.7	Devices	Detect	Collect URL Request Audit Logs	Collect URL request audit logs on enterprise assets, where appropriate and supported.		X	X	Subset	DE.AE-3	Event data are collected and correlated from multiple sources and sensors	
92	8	8.8	Network	Detect	Collect Command-Line Audit Logs	Collect command-line audit logs. Example implementations include collecting audit logs from PowerShell®, BASH™, and remote administrative terminals.		X	X	Subset	PR.PT-1	Audit/log records are determined, documented, implemented, and reviewed in accordance with policy	
93	8	8.8	Network	Detect	Collect Command-Line Audit Logs	Collect command-line audit logs. Example implementations include collecting audit logs from PowerShell®, BASH™, and remote administrative terminals.		X	X	Subset	DE.AE-3	Event data are collected and correlated from multiple sources and sensors	
94	8	8.9	Network	Protect	Centralize Audit Logs	Centralize, to the extent possible, audit log collection and retention across enterprise assets.		X	X	Subset	PR.PT-1	Audit/log records are determined, documented, implemented, and reviewed in accordance with policy	x
95	8	8.10	Network	Protect	Retain Audit Logs	Retain audit logs across enterprise assets for a minimum of 90 days.		X	X	Subset	PR.PT-1	Audit/log records are determined, documented, implemented, and reviewed in accordance with policy	x
96	8	8.11	Network	Detect	Conduct Audit Log Reviews	Conduct reviews of audit logs to detect anomalies or abnormal events that could indicate a potential threat. Conduct reviews on a weekly, or more frequent, basis.		X	X	Equivalent	PR.PT-1	Audit/log records are determined, documented, implemented, and reviewed in accordance with policy	
97	8	8.11	Network	Detect	Conduct Audit Log Reviews	Conduct reviews of audit logs to detect anomalies or abnormal events that could indicate a potential threat. Conduct reviews on a weekly, or more frequent, basis.		X	X	Equivalent	DE.AE-2	Detected events are analyzed to understand attack targets and methods	
98	8	8.11	Network	Detect	Conduct Audit Log Reviews	Conduct reviews of audit logs to detect anomalies or abnormal events that could indicate a potential threat. Conduct reviews on a weekly, or more frequent, basis.		X	X	Subset	RS.AN-1	Notifications from detection systems are investigated	
99	8	8.12	Data	Detect	Collect Service Provider Logs	Collect service provider logs, where supported. Example implementations include collecting authentication and authorization events, data creation and disposal events, and user management events.			X	Superset	DE.AE-3	Event data are collected and correlated from multiple sources and sensors	
100	**9**				**Email and Web Browser Protections**	**Improve protections and detections of threats from email and web vectors, as these are opportunities for attackers to manipulate human behavior through direct engagement.**							
101	9	9.1	Applications	Protect	Ensure Use of Only Fully Supported Browsers and Email Clients	Ensure only fully supported browsers and email clients are allowed to execute in the enterprise, only using the latest version of browsers and email clients provided through the vendor.	X	X	X	Subset	PR.IP-1	A baseline configuration of information technology/industrial control systems is created and maintained incorporating security principles (e.g. concept of least functionality)	
102	9	9.2	Network	Protect	Use DNS Filtering Services	Use DNS filtering services on all enterprise assets to block access to known malicious domains.	X	X	X	Subset	PR.AC-5	Network integrity is protected (e.g., network segregation, network segmentation)	
103	9	9.3	Network	Protect	Maintain and Enforce Network-Based URL Filters	Enforce and update network-based URL filters to limit an enterprise asset from connecting to potentially malicious or unapproved websites. Example implementations include category-based filtering, reputation-based filtering, or through the use of block lists. Enforce filters for all enterprise assets.		X	X	Subset	PR.AC-5	Network integrity is protected (e.g., network segregation, network segmentation)	
104	9	9.4	Applications	Protect	Restrict Unnecessary or Unauthorized Browser and Email Client Extensions	Restrict, either through uninstalling or disabling, any unauthorized or unnecessary browser or email client plugins, extensions, and add-on applications.		X	X	Subset	PR.IP-1	A baseline configuration of information technology/industrial control systems is created and maintained incorporating security principles (e.g. concept of least functionality)	
105	9	9.5	Network	Protect	Implement DMARC	To lower the chance of spoofed or modified emails from valid domains, implement DMARC policy and verification, starting with implementing the Sender Policy Framework (SPF) and the DomainKeys Identified Mail (DKIM) standards.		X	X	Subset	PR.AC-5	Network integrity is protected (e.g., network segregation, network segmentation)	x
106	9	9.6	Network	Protect	Block Unnecessary File Types	Block unnecessary file types attempting to enter the enterprise's email gateway.		X	X	Subset	DE.CM-7	Monitoring for unauthorized personnel, connections, devices, and software is performed	
107	9	9.6	Network	Protect	Block Unnecessary File Types	Block unnecessary file types attempting to enter the enterprise's email gateway.		X	X	Subset	PR.AC-5	Network integrity is protected (e.g., network segregation, network segmentation)	
108	9	9.7	Network	Protect	Deploy and Maintain Email Server Anti-Malware Protections	Deploy and maintain email server anti-malware protections, such as attachment scanning and/or sandboxing.			X	Subset	DE.CM-4	Malicious code is detected	
109	**10**				**Malware Defenses**	**Prevent or control the installation, spread, and execution of malicious applications, code, or scripts on enterprise assets.**							
110	10	10.1	Devices	Protect	Deploy and Maintain Anti-Malware Software	Deploy and maintain anti-malware software on all enterprise assets.	X	X	X	Subset	DE.CM-4	Malicious code is detected	
111	10	10.2	Devices	Protect	Configure Automatic Anti-Malware Signature Updates	Configure automatic updates for anti-malware signature files on all enterprise assets.	X	X	X	Subset	DE.CM-4	Malicious code is detected	
112	10	10.3	Devices	Protect	Disable Autorun and Autoplay for Removable Media	Disable autorun and autoplay auto-execute functionality for removable media.	X	X	X	Equivalent	PR.PT-2	Removable media is protected and its use restricted according to policy	
113	10	10.4	Devices	Detect	Configure Automatic Anti-Malware Scanning of Removable Media	Configure anti-malware software to automatically scan removable media.		X	X	Subset	DE.CM-4	Malicious code is detected	
114	10	10.5	Devices	Protect	Enable Anti-Exploitation Features	Enable anti-exploitation features on enterprise assets and software, where possible, such as Microsoft® Data Execution Prevention (DEP), Windows® Defender Exploit Guard (WDEG), or Apple® System Integrity Protection (SIP) and Gatekeeper™.		X	X	Subset	DE.CM-4	Malicious code is detected	
115	10	10.6	Devices	Protect	Centrally Manage Anti-Malware Software	Centrally manage anti-malware software.		X	X	Subset	DE.CM-4	Malicious code is detected	
116	10	10.7	Devices	Detect	Use Behavior-Based Anti-Malware Software	Use behavior-based anti-malware software.		X	X	Subset	DE.CM-4	Malicious code is detected	
117	**11**				**Data Recovery**	**Establish and maintain data recovery practices sufficient to restore in-scope enterprise assets to a pre-incident and trusted state.**							

118	11	11.1	Data	Recover	Establish and Maintain a Data Recovery Process	Establish and maintain a data recovery process. In the process, address the scope of data recovery activities, recovery prioritization, and the security of backup data. Review and update documentation annually, or when significant enterprise changes occur that could impact this Safeguard.	X	X	X	Subset	PR.IP-9	Response plans (Incident Response and Business Continuity) and recovery plans (Incident Recovery and Disaster Recovery) are in place and managed	
119	11	11.1	Data	Recover	Establish and Maintain a Data Recovery Process	Establish and maintain a data recovery process. In the process, address the scope of data recovery activities, recovery prioritization, and the security of backup data. Review and update documentation annually, or when significant enterprise changes occur that could impact this Safeguard.	X	X	X	Subset	ID.SC-5	Response and recovery planning and testing are conducted with suppliers and third-party providers	
120	11	11.2	Data	Recover	Perform Automated Backups	Perform automated backups of in-scope enterprise assets. Run backups weekly, or more frequently, based on the sensitivity of the data.	X	X	X	Subset	PR.IP-4	Backups of information are conducted, maintained, and tested	
121	11	11.3	Data	Protect	Protect Recovery Data	Protect recovery data with equivalent controls to the original data. Reference encryption or data separation, based on requirements.	X	X	X	Subset	PR.IP-4	Backups of information are conducted, maintained, and tested	
122	11	11.4	Data	Recover	Establish and Maintain an Isolated Instance of Recovery Data	Establish and maintain an isolated instance of recovery data. Example implementations include, version controlling backup destinations through offline, cloud, or off-site systems or services.	X	X	X	Subset	PR.PT-5	Mechanisms (e.g., failsafe, load balancing, hot swap) are implemented to achieve resilience requirements in normal and adverse situations	
123	11	11.5	Data	Recover	Test Data Recovery	Test backup recovery quarterly, or more frequently, for a sampling of in-scope enterprise assets.		X	X	Subset	PR.DS-6	Integrity checking mechanisms are used to verify software, firmware, and information integrity	
124	**12**				**Network Infrastructure Management**	**Establish, implement, and actively manage (track, report, correct) network devices, in order to prevent attackers from exploiting vulnerable network services and access points.**							
125	12	12.1	Network	Protect	Ensure Network Infrastructure is Up-to-Date	Ensure network infrastructure is kept up-to-date. Example implementations include running the latest stable release of software and/or using currently supported network-as-a-service (NaaS) offerings. Review software versions monthly, or more frequently, to verify software support.	X	X	X	Subset	PR.MA-1	Maintenance and repair of organizational assets are performed and logged, with approved and controlled tools	x
126	12	12.2	Network	Protect	Establish and Maintain a Secure Network Architecture	Establish and maintain a secure network architecture. A secure network architecture must address segmentation, least privilege, and availability, at a minimum.		X	X	Equivalent	PR.AC-5	Network integrity is protected (e.g., network segregation, network segmentation)	
127	12	12.3	Network	Protect	Securely Manage Network Infrastructure	Securely manage network infrastructure. Example implementations include version-controlled-infrastructure-as-code, and the use of secure network protocols, such as SSH and HTTPS.		X	X	Superset	PR.AC-7	Users, devices, and other assets are authenticated (e.g., single-factor, multi-factor) commensurate with the risk of the transaction (e.g., individuals' security and privacy risks and other organizational risks)	
128	12	12.3	Network	Protect	Securely Manage Network Infrastructure	Securely manage network infrastructure. Example implementations include version-controlled-infrastructure-as-code, and the use of secure network protocols, such as SSH and HTTPS.		X	X	Subset	PR.DS-2	Data-in-transit is protected	
129	12	12.4	Network	Identify	Establish and Maintain Architecture Diagram(s)	Establish and maintain architecture diagram(s) and/or other network system documentation. Review and update documentation annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Superset	ID.AM-4	External information systems are catalogued	
130	12	12.5	Network	Protect	Centralize Network Authentication, Authorization, and Auditing (AAA)	Centralize network AAA.		X	X	Superset	PR.AC-4	Access permissions and authorizations are managed, incorporating the principles of least privilege and separation of duties	
131	12	12.6	Network	Protect	Use of Secure Network Management and Communication Protocols	Use secure network management and communication protocols (e.g., 802.1X, Wi-Fi Protected Access 2 (WPA2) Enterprise or greater).		X	X	Superset	PR.AC-7	Users, devices, and other assets are authenticated (e.g., single-factor, multi-factor) commensurate with the risk of the transaction (e.g., individuals' security and privacy risks and other organizational risks)	
132	12	12.6	Network	Protect	Use of Secure Network Management and Communication Protocols	Use secure network management and communication protocols (e.g., 802.1X, Wi-Fi Protected Access 2 (WPA2) Enterprise or greater).		X	X	Subset	PR.DS-2	Data-in-transit is protected	
133	12	12.7	Devices	Protect	Ensure Remote Devices Utilize a VPN and are Connecting to an Enterprise's AAA Infrastructure	Require users to authenticate to enterprise-managed VPN and authentication services prior to accessing enterprise resources on end-user devices.		X	X	Subset	PR.AC-3	Remote access is managed	
134	12	12.7	Devices	Protect	Ensure Remote Devices Utilize a VPN and are Connecting to an Enterprise's AAA Infrastructure	Require users to authenticate to enterprise-managed VPN and authentication services prior to accessing enterprise resources on end-user devices.		X	X	Subset	PR.AC-7	Users, devices, and other assets are authenticated (e.g., single-factor, multi-factor) commensurate with the risk of the transaction (e.g., individuals' security and privacy risks and other organizational risks)	
135	12	12.8	Devices	Protect	Establish and Maintain Dedicated Computing Resources for All Administrative Work	Establish and maintain dedicated computing resources, either physically or logically separated, for all administrative tasks or tasks requiring administrative access. The computing resources should be segmented from the enterprise's primary network and not be allowed internet access.			X	Subset	PR.AC-5	Network integrity is protected (e.g., network segregation, network segmentation)	
136	**13**				**Network Monitoring and Defense**	**Operate processes and tooling to establish and maintain comprehensive network monitoring and defense against security threats across the enterprise's network infrastructure and user base.**							
137	13	13.1	Network	Detect	Centralize Security Event Alerting	Centralize security event alerting across enterprise assets for log correlation and analysis. Best practice implementation requires the use of a SIEM, which includes vendor-defined event correlation alerts. A log analytics platform configured with security-relevant correlation alerts also satisfies this Safeguard.		X	X	Superset	PR.PT-1	Audit/log records are determined, documented, implemented, and reviewed in accordance with policy	
138	13	13.2	Devices	Detect	Deploy a Host-Based Intrusion Detection Solution	Deploy a host-based intrusion detection solution on enterprise assets, where appropriate and/or supported.		X	X	Subset	DE.CM-1	The network is monitored to detect potential cybersecurity events	
139	13	13.3	Network	Detect	Deploy a Network Intrusion Detection Solution	Deploy a network intrusion detection solution on enterprise assets, where appropriate. Example implementations include the use of a Network Intrusion Detection System (NIDS) or equivalent cloud service provider (CSP) service.		X	X	Subset	DE.CM-1	The network is monitored to detect potential cybersecurity events	

140	13	13.4	Network	Protect	Perform Traffic Filtering Between Network Segments	Perform traffic filtering between network segments, where appropriate.		X	X	Subset	PR.AC-5	Network integrity is protected (e.g., network segregation, network segmentation)	
141	13	13.5	Devices	Protect	Manage Access Control for Remote Assets	Manage access control for assets remotely connecting to enterprise resources. Determine amount of access to enterprise resources based on: up-to-date anti-malware software installed, configuration compliance with the enterprise's secure configuration process, and ensuring the operating system and applications are up-to-date.		X	X	Equivalent	PR.AC-3	Remote access is managed	
142	13	13.5	Devices	Protect	Manage Access Control for Remote Assets	Manage access control for assets remotely connecting to enterprise resources. Determine amount of access to enterprise resources based on: up-to-date anti-malware software installed, configuration compliance with the enterprise's secure configuration process, and ensuring the operating system and applications are up-to-date.		X	X	Subset	PR.AC-7	Users, devices, and other assets are authenticated (e.g., single-factor, multi-factor) commensurate with the risk of the transaction (e.g., individuals' security and privacy risks and other organizational risks)	
143	13	13.5	Devices	Protect	Manage Access Control for Remote Assets	Manage access control for assets remotely connecting to enterprise resources. Determine amount of access to enterprise resources based on: up-to-date anti-malware software installed, configuration compliance with the enterprise's secure configuration process, and ensuring the operating system and applications are up-to-date.		X	X	Superset	PR.MA-2	Remote maintenance of organizational assets is approved, logged, and performed in a manner that prevents unauthorized access	
144	13	13.6	Network	Detect	Collect Network Traffic Flow Logs	Collect network traffic flow logs and/or network traffic to review and alert upon from network devices.		X	X	Subset	DE.CM-1	The network is monitored to detect potential cybersecurity events	
145	13	13.7	Devices	Protect	Deploy a Host-Based Intrusion Prevention Solution	Deploy a host-based intrusion prevention solution on enterprise assets, where appropriate and/or supported. Example implementations include use of an Endpoint Detection and Response (EDR) client or host-based IPS agent.			X	Subset	DE.CM-1	The network is monitored to detect potential cybersecurity events	
146	13	13.8	Network	Protect	Deploy a Network Intrusion Prevention Solution	Deploy a network intrusion prevention solution, where appropriate. Example implementations include the use of a Network Intrusion Prevention System (NIPS) or equivalent CSP service.			X	Subset	DE.CM-1	The network is monitored to detect potential cybersecurity events	
147	13	13.9	Devices	Protect	Deploy Port-Level Access Control	Deploy port-level access control. Port-level access control utilizes 802.1x, or similar network access control protocols, such as certificates, and may incorporate user and/or device authentication.			X	Subset	PR.AC-1	Identities and credentials are issued, managed, verified, revoked, and audited for authorized devices, users and processes	
148	13	13.10	Network	Protect	Perform Application Layer Filtering	Perform application layer filtering. Example implementations include a filtering proxy, application layer firewall, or gateway.			X	Subset	PR.PT-3	The principle of least functionality is incorporated by configuring systems to provide only essential capabilities	
149	13	13.11	Network	Detect	Tune Security Event Alerting Thresholds	Tune security event alerting thresholds monthly, or more frequently.			X	Equivalent	DE.AE-5	Incident alert thresholds are established	
150	**14**				**Security Awareness and Skills Training**	**Establish and maintain a security awareness program to influence behavior among the workforce to be security conscious and properly skilled to reduce cybersecurity risks to the enterprise.**							
151	14	14.1	N/A	Protect	Establish and Maintain a Security Awareness Program	Establish and maintain a security awareness program. The purpose of a security awareness program is to educate the enterprise's workforce on how to interact with enterprise assets and data in a secure manner. Conduct training at hire and, at a minimum, annually. Review and update content annually, or when significant enterprise changes occur that could impact this Safeguard.	X	X	X	Superset	ID.AM-6	Cybersecurity roles and responsibilities for the entire workforce and third-party stakeholders (e.g., suppliers, customers, partners) are established	
152	14	14.1	N/A	Protect	Establish and Maintain a Security Awareness Program	Establish and maintain a security awareness program. The purpose of a security awareness program is to educate the enterprise's workforce on how to interact with enterprise assets and data in a secure manner. Conduct training at hire and, at a minimum, annually. Review and update content annually, or when significant enterprise changes occur that could impact this Safeguard.	X	X	X	Subset	ID.GV-1	Organizational cybersecurity policy is established and communicated	
153	14	14.1	N/A	Protect	Establish and Maintain a Security Awareness Program	Establish and maintain a security awareness program. The purpose of a security awareness program is to educate the enterprise's workforce on how to interact with enterprise assets and data in a secure manner. Conduct training at hire and, at a minimum, annually. Review and update content annually, or when significant enterprise changes occur that could impact this Safeguard.	X	X	X	Equivalent	PR.AT-1	All users are informed and trained	
154	14	14.2	N/A	Protect	Train Workforce Members to Recognize Social Engineering Attacks	Train workforce members to recognize social engineering attacks, such as phishing, pre-texting, and tailgating.	X	X	X	Subset	PR.AT-1	All users are informed and trained	
155	14	14.3	N/A	Protect	Train Workforce Members on Authentication Best Practices	Train workforce members on authentication best practices. Example topics include MFA, password composition, and credential management.	X	X	X	Subset	PR.AT-1	All users are informed and trained	
156	14	14.4	N/A	Protect	Train Workforce on Data Handling Best Practices	Train workforce members on how to identify and properly store, transfer, archive, and destroy sensitive data. This also includes training workforce members on clear screen and desk best practices, such as locking their screen when they step away from their enterprise asset, erasing physical and virtual whiteboards at the end of meetings, and storing data and assets securely.	X	X	X	Subset	PR.AT-1	All users are informed and trained	
157	14	14.5	N/A	Protect	Train Workforce Members on Causes of Unintentional Data Exposure	Train workforce members to be aware of causes for unintentional data exposure. Example topics include mis-delivery of sensitive data, losing a portable end-user device, or publishing data to unintended audiences.	X	X	X	Subset	PR.AT-1	All users are informed and trained	
158	14	14.6	N/A	Protect	Train Workforce Members on Recognizing and Reporting Security Incidents	Train workforce members to be able to recognize a potential incident and be able to report such an incident.	X	X	X	Subset	PR.AT-1	All users are informed and trained	
159	14	14.7	N/A	Protect	Train Workforce on How to Identify and Report if Their Enterprise Assets are Missing Security Updates	Train workforce to understand how to verify and report out-of-date software patches or any failures in automated processes and tools. Part of this training should include notifying IT personnel of any failures in automated processes and tools.	X	X	X	Subset	PR.AT-1	All users are informed and trained	
160	14	14.8	N/A	Protect	Train Workforce on the Dangers of Connecting to and Transmitting Enterprise Data Over Insecure Networks	Train workforce members on the dangers of connecting to, and transmitting data over, insecure networks for enterprise activities. If the enterprise has remote workers, training must include guidance to ensure that all users securely configure their home network infrastructure.	X	X	X	Subset	PR.AT-1	All users are informed and trained	
161	14	14.9	N/A	Protect	Conduct Role-Specific Security Awareness and Skills Training	Conduct role-specific security awareness and skills training. Example implementations include secure system administration courses for IT professionals, (OWASP® Top 10 vulnerability awareness and prevention training for web application developers, and advanced social engineering awareness training for high-profile roles.		X	X	Subset	PR.AT-1	All users are informed and trained	
162	14	14.9	N/A	Protect	Conduct Role-Specific Security Awareness and Skills Training	Conduct role-specific security awareness and skills training. Example implementations include secure system administration courses for IT professionals, (OWASP® Top 10 vulnerability awareness and prevention training for web application developers, and advanced social engineering awareness training for high-profile roles.		X	X	Superset	PR.AT-2	Privileged users understand their roles and responsibilities	

163	14	14.9	N/A	Protect	Conduct Role-Specific Security Awareness and Skills Training	Conduct role-specific security awareness and skills training. Example implementations include secure system administration courses for IT professionals, (OWASP® Top 10 vulnerability awareness and prevention training for web application developers, and advanced social engineering awareness training for high-profile roles.		X	X	Superset	PR.AT-4	Senior executives understand their roles and responsibilities	
164	14	14.9	N/A	Protect	Conduct Role-Specific Security Awareness and Skills Training	Conduct role-specific security awareness and skills training. Example implementations include secure system administration courses for IT professionals, (OWASP® Top 10 vulnerability awareness and prevention training for web application developers, and advanced social engineering awareness training for high-profile roles.		X	X	Superset	PR.AT-5	Physical and cybersecurity personnel understand their roles and responsibilities	
165	**15**				**Service Provider Management**	**Develop a process to evaluate service providers who hold sensitive data, or are responsible for an enterprise's critical IT platforms or processes, to ensure these providers are protecting those platforms and data appropriately.**							
166	15	15.1	N/A	Identify	Establish and Maintain an Inventory of Service Providers	Establish and maintain an inventory of service providers. The inventory is to list all known service providers, include classification(s), and designate an enterprise contact for each service provider. Review and update the inventory annually, or when significant enterprise changes occur that could impact this Safeguard.	X	X	X	Subset	ID.SC-2	Suppliers and third party partners of information systems, components, and services are identified, prioritized, and assessed using a cyber supply chain risk assessment process	
167	15	15.2	N/A	Identify	Establish and Maintain a Service Provider Management Policy	Establish and maintain a service provider management policy. Ensure the policy addresses the classification, inventory, assessment, monitoring, and decommissioning of service providers. Review and update the policy annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Equivalent	ID.GV-2	Cybersecurity roles and responsibilities are coordinated and aligned with internal roles and external partners	
168	15	15.2	N/A	Identify	Establish and Maintain a Service Provider Management Policy	Establish and maintain a service provider management policy. Ensure the policy addresses the classification, inventory, assessment, monitoring, and decommissioning of service providers. Review and update the policy annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Subset	ID.SC-1	Cyber supply chain risk management processes are identified, established, assessed, managed, and agreed to by organizational stakeholders	
169	15	15.3	N/A	Identify	Classify Service Providers	Classify service providers. Classification consideration may include one or more characteristics, such as data sensitivity, data volume, availability requirements, applicable regulations, inherent risk, and mitigated risk. Update and review classifications annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Subset	ID.SC-2	Suppliers and third party partners of information systems, components, and services are identified, prioritized, and assessed using a cyber supply chain risk assessment process	
170	15	15.4	N/A	Protect	Ensure Service Provider Contracts Include Security Requirements	Ensure service provider contracts include security requirements. Example requirements may include minimum security program requirements, security incident and/or data breach notification and response, data encryption requirements, and data disposal commitments. These security requirements must be consistent with the enterprise's service provider management policy. Review service provider contracts annually to ensure contracts are not missing security requirements.		X	X	Equivalent	ID.SC-3	Contracts with suppliers and third-party partners are used to implement appropriate measures designed to meet the objectives of an organization's cybersecurity program and Cyber Supply Chain Risk Management Plan.	
171	15	15.4	N/A	Protect	Ensure Service Provider Contracts Include Security Requirements	Ensure service provider contracts include security requirements. Example requirements may include minimum security program requirements, security incident and/or data breach notification and response, data encryption requirements, and data disposal commitments. These security requirements must be consistent with the enterprise's service provider management policy. Review service provider contracts annually to ensure contracts are not missing security requirements.		X	X	Superset	PR.AT-3	Third-party stakeholders (e.g., suppliers, customers, partners) understand their roles and responsibilities	
172	15	15.5	N/A	Identify	Assess Service Providers	Assess service providers consistent with the enterprise's service provider management policy. Assessment scope may vary based on classification(s), and may include review of standardized assessment reports, such as Service Organization Control 2 (SOC 2) and Payment Card Industry (PCI) Attestation of Compliance (AoC), customized questionnaires, or other appropriately rigorous processes. Reassess service providers annually, at a minimum, or with new and renewed contracts.			X	Equivalent	ID.SC-4	Suppliers and third-party partners are routinely assessed using audits, test results, or other forms of evaluations to confirm they are meeting their contractual obligations.	
173	15	15.5	N/A	Identify	Assess Service Providers	Assess service providers consistent with the enterprise's service provider management policy. Assessment scope may vary based on classification(s), and may include review of standardized assessment reports, such as Service Organization Control 2 (SOC 2) and Payment Card Industry (PCI) Attestation of Compliance (AoC), customized questionnaires, or other appropriately rigorous processes. Reassess service providers annually, at a minimum, or with new and renewed contracts.			X	Equivalent	ID.SC-2	Suppliers and third party partners of information systems, components, and services are identified, prioritized, and assessed using a cyber supply chain risk assessment process	
174	15	15.6	Data	Detect	Monitor Service Providers	Monitor service providers consistent with the enterprise's service provider management policy. Monitoring may include periodic reassessment of service provider compliance, monitoring service provider release notes, and dark web monitoring.			X	Equivalent	DE.CM-6	External service provider activity is monitored to detect potential cybersecurity events	
175	15	15.7	Data	Protect	Securely Decommission Service Providers	Securely decommission service providers. Example considerations include user and service account deactivation, termination of data flows, and secure disposal of enterprise data within service provider systems.			X	Subset	PR.AC-1	Identities and credentials are issued, managed, verified, revoked, and audited for authorized devices, users and processes	
176	**16**				**Application Software Security**	**Manage the security life cycle of in-house developed, hosted, or acquired software to prevent, detect, and remediate security weaknesses before they can impact the enterprise.**							
177	16	16.1	Applications	Protect	Establish and Maintain a Secure Application Development Process	Establish and maintain a secure application development process. In the process, address such items as: secure application design standards, secure coding practices, developer training, vulnerability management, security of third-party code, and application security testing procedures. Review and update documentation annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Subset	PR.IP-2	A System Development Life Cycle to manage systems is implemented	x
178	16	16.2	Applications	Protect	Establish and Maintain a Process to Accept and Address Software Vulnerabilities	Establish and maintain a process to accept and address reports of software vulnerabilities, including providing a means for external entities to report. The process is to include such items as: a vulnerability handling policy that identifies reporting process, responsible party for handling vulnerability reports, and a process for intake, assignment, remediation, and remediation testing. As part of the process, use a vulnerability tracking system that includes severity ratings, and metrics for measuring timing for identification, analysis, and remediation of vulnerabilities. Review and update documentation annually, or when significant enterprise changes occur that could impact this Safeguard. Third-party application developers need to consider this an externally-facing policy that helps to set expectations for outside stakeholders.		X	X	Equivalent	RS.AN-5	Processes are established to receive, analyze and respond to vulnerabilities disclosed to the organization from internal and external sources (e.g. internal testing, security bulletins, or security researchers)	

179	16	16.3	Applications	Protect	Perform Root Cause Analysis on Security Vulnerabilities	Perform root cause analysis on security vulnerabilities. When reviewing vulnerabilities, root cause analysis is the task of evaluating underlying issues that create vulnerabilities in code, and allows development teams to move beyond just fixing individual vulnerabilities as they arise.		X	X	Subset	RS.AN-1	Notifications from detection systems are investigated	
180	16	16.4	Applications	Protect	Establish and Manage an Inventory of Third-Party Software Components	Establish and manage an updated inventory of third-party components used in development, often referred to as a "bill of materials," as well as components slated for future use. This inventory is to include any risks that each third-party component could pose. Evaluate the list at least monthly to identify any changes or updates to these components, and validate that the component is still supported.		X	X	Subset	ID.AM-2	Software platforms and applications within the organization are inventoried	
181	16	16.5	Applications	Protect	Use Up-to-Date and Trusted Third-Party Software Components	Use up-to-date and trusted third-party software components. When possible, choose established and proven frameworks and libraries that provide adequate security. Acquire these components from trusted sources or evaluate the software for vulnerabilities before use.		X	X	Subset	PR.IP-2	A System Development Life Cycle to manage systems is implemented	
182	16	16.6	Applications	Protect	Establish and Maintain a Severity Rating System and Process for Application Vulnerabilities	Establish and maintain a severity rating system and process for application vulnerabilities that facilitates prioritizing the order in which discovered vulnerabilities are fixed. This process includes setting a minimum level of security acceptability for releasing code or applications. Severity ratings bring a systematic way of triaging vulnerabilities that improves risk management and helps ensure the most severe bugs are fixed first. Review and update the system and process annually.		X	X	Subset	RS.AN-1	Notifications from detection systems are investigated	
183	16	16.7	Applications	Protect	Use Standard Hardening Configuration Templates for Application Infrastructure	Use standard, industry-recommended hardening configuration templates for application infrastructure components. This includes underlying servers, databases, and web servers, and applies to cloud containers, Platform as a Service (PaaS) components, and SaaS components. Do not allow in-house developed software to weaken configuration hardening.		X	X	Subset	PR.IP-1	A baseline configuration of information technology/industrial control systems is created and maintained incorporating security principles (e.g. concept of least functionality)	
184	16	16.8	Applications	Protect	Separate Production and Non-Production Systems	Maintain separate environments for production and non-production systems.		X	X	Equivalent	PR.DS-7	The development and testing environment(s) are separate from the production environment	
185	16	16.9	Applications	Protect	Train Developers in Application Security Concepts and Secure Coding	Ensure that all software development personnel receive training in writing secure code for their specific development environment and responsibilities. Training can include general security principles and application security standard practices. Conduct training at least annually and design in a way to promote security within the development team, and build a culture of security among the developers.		X	X	Subset	PR.AT-1	All users are informed and trained	
186	16	16.9	Applications	Protect	Train Developers in Application Security Concepts and Secure Coding	Ensure that all software development personnel receive training in writing secure code for their specific development environment and responsibilities. Training can include general security principles and application security standard practices. Conduct training at least annually and design in a way to promote security within the development team, and build a culture of security among the developers.		X	X	Subset	PR.AT-2	Privileged users understand their roles and responsibilities	
187	16	16.10	Applications	Protect	Apply Secure Design Principles in Application Architectures	Apply secure design principles in application architectures. Secure design principles include the concept of least privilege and enforcing mediation to validate every operation that the user makes, promoting the concept of "never trust user input." Examples include ensuring that explicit error checking is performed and documented for all input, including for size, data type, and acceptable ranges or formats. Secure design also means minimizing the application infrastructure attack surface, such as turning off unprotected ports and services, removing unnecessary programs and files, and renaming or removing default accounts.		X	X	Subset	PR.IP-2	A System Development Life Cycle to manage systems is implemented	
188	16	16.11	Applications	Protect	Leverage Vetted Modules or Services for Application Security Components	Leverage vetted modules or services for application security components, such as identity management, encryption, and auditing and logging. Using platform features in critical security functions will reduce developers' workload and minimize the likelihood of design or implementation errors. Modern operating systems provide effective mechanisms for identification, authentication, and authorization and make those mechanisms available to applications. Use only standardized, currently accepted, and extensively reviewed encryption algorithms. Operating systems also provide mechanisms to create and maintain secure audit logs.		X	X	Subset	PR.DS-1	Data-at-rest is protected	
189	16	16.11	Applications	Protect	Leverage Vetted Modules or Services for Application Security Components	Leverage vetted modules or services for application security components, such as identity management, encryption, and auditing and logging. Using platform features in critical security functions will reduce developers' workload and minimize the likelihood of design or implementation errors. Modern operating systems provide effective mechanisms for identification, authentication, and authorization and make those mechanisms available to applications. Use only standardized, currently accepted, and extensively reviewed encryption algorithms. Operating systems also provide mechanisms to create and maintain secure audit logs.		X	X	Subset	PR.DS-2	Data-in-transit is protected	
190	16	16.12	Applications	Protect	Implement Code-Level Security Checks	Apply static and dynamic analysis tools within the application life cycle to verify that secure coding practices are being followed.			X	Subset	PR.IP-2	A System Development Life Cycle to manage systems is implemented	
191	16	16.13	Applications	Protect	Conduct Application Penetration Testing	Conduct application penetration testing. For critical applications, authenticated penetration testing is better suited to finding business logic vulnerabilities than code scanning and automated security testing. Penetration testing relies on the skill of the tester to manually manipulate an application as an authenticated and unauthenticated user.			X	Subset	RS.AN-5	Processes are established to receive, analyze and respond to vulnerabilities disclosed to the organization from internal and external sources (e.g. internal testing, security bulletins, or security researchers)	x
192	16	16.14	Applications	Protect	Conduct Threat Modeling	Conduct threat modeling. Threat modeling is the process of identifying and addressing application security design flaws within a design, before code is created. It is conducted through specially trained individuals who evaluate the application design and gauge security risks for each entry point and access level. The goal is to map out the application, architecture, and infrastructure in a structured way to understand its weaknesses.			X	Subset	PR.AC-5	Network integrity is protected (e.g., network segregation, network segmentation)	
193	16	16.14	Applications	Protect	Conduct Threat Modeling	Conduct threat modeling. Threat modeling is the process of identifying and addressing application security design flaws within a design, before code is created. It is conducted through specially trained individuals who evaluate the application design and gauge security risks for each entry point and access level. The goal is to map out the application, architecture, and infrastructure in a structured way to understand its weaknesses.			X	Subset	PR.DS-5	Protections against data leaks are implemented	
194	16	16.14	Applications	Protect	Conduct Threat Modeling	Conduct threat modeling. Threat modeling is the process of identifying and addressing application security design flaws within a design, before code is created. It is conducted through specially trained individuals who evaluate the application design and gauge security risks for each entry point and access level. The goal is to map out the application, architecture, and infrastructure in a structured way to understand its weaknesses.			X	Subset	PR.DS-8	Integrity checking mechanisms are used to verify hardware integrity	

195	16	16.14	Applications	Protect	Conduct Threat Modeling	Conduct threat modeling. Threat modeling is the process of identifying and addressing application security design flaws within a design, before code is created. It is conducted through specially trained individuals who evaluate the application design and gauge security risks for each entry point and access level. The goal is to map out the application, architecture, and infrastructure in a structured way to understand its weaknesses.			X	Subset	PR.IP-7	Protection processes are improved	
196	**17**				**Incident Response Management**	**Establish a program to develop and maintain an incident response capability (e.g., policies, plans, procedures, defined roles, training, and communications) to prepare, detect, and quickly respond to an attack.**							
197	17	17.1	N/A	Respond	Designate Personnel to Manage Incident Handling	Designate one key person, and at least one backup, who will manage the enterprise's incident handling process. Management personnel are responsible for the coordination and documentation of incident response and recovery efforts and can consist of employees internal to the enterprise, third-party vendors, or a hybrid approach. If using a third-party vendor, designate at least one person internal to the enterprise to oversee any third-party work. Review annually, or when significant enterprise changes occur that could impact this Safeguard.	X	X	X	Subset	PR.IP-9	Response plans (Incident Response and Business Continuity) and recovery plans (Incident Recovery and Disaster Recovery) are in place and managed	
198	17	17.1	N/A	Respond	Designate Personnel to Manage Incident Handling	Designate one key person, and at least one backup, who will manage the enterprise's incident handling process. Management personnel are responsible for the coordination and documentation of incident response and recovery efforts and can consist of employees internal to the enterprise, third-party vendors, or a hybrid approach. If using a third-party vendor, designate at least one person internal to the enterprise to oversee any third-party work. Review annually, or when significant enterprise changes occur that could impact this Safeguard.	X	X	X	Superset	DE.DP-1	Roles and responsibilities for detection are well defined to ensure accountability	
199	17	17.2	N/A	Respond	Establish and Maintain Contact Information for Reporting Security Incidents	Establish and maintain contact information for parties that need to be informed of security incidents. Contacts may include internal staff, third-party vendors, law enforcement, cyber insurance providers, relevant government agencies, Information Sharing and Analysis Center (ISAC) partners, or other stakeholders. Verify contacts annually to ensure that information is up-to-date.	X	X	X	Subset	RS.CO-1	Personnel know their roles and order of operations when a response is needed	
200	17	17.3	N/A	Respond	Establish and Maintain an Enterprise Process for Reporting Incidents	Establish and maintain an enterprise process for the workforce to report security incidents. The process includes reporting timeframe, personnel to report to, mechanism for reporting, and the minimum information to be reported. Ensure the process is publicly available to all of the workforce. Review annually, or when significant enterprise changes occur that could impact this Safeguard.	X	X	X	Subset	PR.IP-9	Response plans (Incident Response and Business Continuity) and recovery plans (Incident Recovery and Disaster Recovery) are in place and managed	
201	17	17.3	N/A	Respond	Establish and Maintain an Enterprise Process for Reporting Incidents	Establish and maintain an enterprise process for the workforce to report security incidents. The process includes reporting timeframe, personnel to report to, mechanism for reporting, and the minimum information to be reported. Ensure the process is publicly available to all of the workforce. Review annually, or when significant enterprise changes occur that could impact this Safeguard.	X	X	X	Subset	PR.AT-1	All users are informed and trained	
202	17	17.4	N/A	Respond	Establish and Maintain an Incident Response Process	Establish and maintain an incident response process that addresses roles and responsibilities, compliance requirements, and a communication plan. Review annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Superset	ID.GV-2	Cybersecurity roles and responsibilities are coordinated and aligned with internal roles and external partners	
203	17	17.4	N/A	Respond	Establish and Maintain an Incident Response Process	Establish and maintain an incident response process that addresses roles and responsibilities, compliance requirements, and a communication plan. Review annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Equivalent	PR.IP-9	Response plans (Incident Response and Business Continuity) and recovery plans (Incident Recovery and Disaster Recovery) are in place and managed	
204	17	17.4	N/A	Respond	Establish and Maintain an Incident Response Process	Establish and maintain an incident response process that addresses roles and responsibilities, compliance requirements, and a communication plan. Review annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Superset	DE.DP-1	Roles and responsibilities for detection are well defined to ensure accountability	
205	17	17.4	N/A	Respond	Establish and Maintain an Incident Response Process	Establish and maintain an incident response process that addresses roles and responsibilities, compliance requirements, and a communication plan. Review annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Superset	RS.CO-1	Personnel know their roles and order of operations when a response is needed	
206	17	17.5	N/A	Respond	Assign Key Roles and Responsibilities	Assign key roles and responsibilities for incident response, including staff from legal, IT, information security, facilities, public relations, human resources, incident responders, and analysts, as applicable. Review annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Superset	DE.DP-4	Event detection information is communicated	
207	17	17.5	N/A	Respond	Assign Key Roles and Responsibilities	Assign key roles and responsibilities for incident response, including staff from legal, IT, information security, facilities, public relations, human resources, incident responders, and analysts, as applicable. Review annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Superset	RS.CO-2	Incidents are reported consistent with established criteria	
208	17	17.5	N/A	Respond	Assign Key Roles and Responsibilities	Assign key roles and responsibilities for incident response, including staff from legal, IT, information security, facilities, public relations, human resources, incident responders, and analysts, as applicable. Review annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Superset	RS.CO-3	Information is shared consistent with response plans	
209	17	17.5	N/A	Respond	Assign Key Roles and Responsibilities	Assign key roles and responsibilities for incident response, including staff from legal, IT, information security, facilities, public relations, human resources, incident responders, and analysts, as applicable. Review annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Superset	RS.CO-4	Coordination with stakeholders occurs consistent with response plans	
210	17	17.6	N/A	Respond	Define Mechanisms for Communicating During Incident Response	Determine which primary and secondary mechanisms will be used to communicate and report during a security incident. Mechanisms can include phone calls, emails, or letters. Keep in mind that certain mechanisms, such as emails, can be affected during a security incident. Review annually, or when significant enterprise changes occur that could impact this Safeguard.		X	X	Superset	RS.CO-3	Information is shared consistent with response plans	x
211	17	17.7	N/A	Recover	Conduct Routine Incident Response Exercises	Plan and conduct routine incident response exercises and scenarios for key personnel involved in the incident response process to prepare for responding to real-world incidents. Exercises need to test communication channels, decision making, and workflows. Conduct testing on an annual basis, at a minimum.		X	X	Equivalent	PR.IP-10	Response and recovery plans are tested	
212	17	17.8	N/A	Recover	Conduct Post-Incident Reviews	Conduct post-incident reviews. Post-incident reviews help prevent incident recurrence through identifying lessons learned and follow-up action.		X	X	Subset	RS.IM-1	Response plans incorporate lessons learned	
213	17	17.8	N/A	Recover	Conduct Post-Incident Reviews	Conduct post-incident reviews. Post-incident reviews help prevent incident recurrence through identifying lessons learned and follow-up action.		X	X	Subset	RS.IM-2	Response strategies are updated	
214	17	17.9	N/A	Recover	Establish and Maintain Security Incident Thresholds	Establish and maintain security incident thresholds, including, at a minimum, differentiating between an incident and an event. Examples can include: abnormal activity, security vulnerability, security weakness, data breach, privacy incident, etc. Review annually, or when significant enterprise changes occur that could impact this Safeguard.			X	Superset	RS.AN-4	Incidents are categorized consistent with response plans	

215	18				**Penetration Testing**	**Test the effectiveness and resiliency of enterprise assets through identifying and exploiting weaknesses in controls (people, processes, and technology), and simulating the objectives and actions of an attacker.**								
216	18	18.1	N/A	Identify	Establish and Maintain a Penetration Testing Program	Establish and maintain a penetration testing program appropriate to the size, complexity, and maturity of the enterprise. Penetration testing program characteristics include scope, such as network, web application, Application Programming Interface (API), hosted services, and physical premise controls; frequency; limitations, such as acceptable hours, and excluded attack types; point of contact information; remediation, such as how findings will be routed internally; and retrospective requirements.		X	X	Subset	PR.IP-7	Protection processes are improved	
217	18	18.2	Network	Identify	Perform Periodic External Penetration Tests	Perform periodic external penetration tests based on program requirements, no less than annually. External penetration testing must include enterprise and environmental reconnaissance to detect exploitable information. Penetration testing requires specialized skills and experience and must be conducted through a qualified party. The testing may be clear box or opaque box.		X	X	Subset	ID.RA-3	Threats, both internal and external, are identified and documented	x
218	18	18.3	Network	Protect	Remediate Penetration Test Findings	Remediate penetration test findings based on the enterprise's policy for remediation scope and prioritization.		X	X	Subset	RS.AN-5	Processes are established to receive, a	x
219	18	18.4	Network	Protect	Validate Security Measures	Validate security measures after each penetration test. If deemed necessary, modify rulesets and capabilities to detect the techniques used during testing.			X	Subset	PR.IP-7	Protection processes are improved	x
220	18	18.5	N/A	Identify	Perform Periodic Internal Penetration Tests	Perform periodic internal penetration tests based on program requirements, no less than annually. The testing may be clear box or opaque box.			X	Subset	ID.RA-3	Threats, both internal and external, are identified and documented	x
